

## Recently Awarded Projects

In January, Gilchrist was awarded a \$16.7 MM job in nearby Vernon Parish. The project consists of adding new westbound lanes to LA 28 from the Rapides/Vernon Parish Line to LA 465, approximately 6 miles in length. Major scopes of work include mass excavation and embankment, cement treated base course, asphalt paving and the construction of two (2) prestressed-precast concrete girder bridges.

During the month of February, The Gilchrist Team was the low bidder on the LA 131 Relocation in Concordia Parish and Rat Bois Bayou & Bayou Nid Aigle Bridges in Natchitoches Parish. The existing timber trestle bridge over Rat Bois Bayou will be replaced with a quad beam girder bridge, while the existing Bayou Nid Aigle Bridge will be replaced with a concrete slab span bridge. The \$1.8 MM Concordia Parish project will relocate the existing alignment of LA 131 near St. Genevieve, and will include minor excavation and embankment, class II base course, and asphaltic concrete paving. The \$2.7MM Natchitoches Parish project includes the replacement of two (2) bridges on LA 491 near Cloutierville.
